Mount Dumaresq Regional Park Management Statement

Park purpose

Mount Dumaresq Regional Park was formally gazetted as Mount Dumaresq Environmental Park in 1988 under the *Lands Act 1962*. In 1994 the environmental park was gazetted to Mount Dumaresq Conservation Park under the *Nature Conservation Act 1992*.

No park specific purpose was identified as part of the gazettal.

Park size	117ha	
Bioregion	Brigalow Belt	
Local government area	Southern Downs Regional	
State electorate	Southern Downs	
QPWS region	South West	
Year prepared: 2015	Review date: 2025	

Strategic direction for park management

Based on an evaluation of its natural, cultural and presentation values, Mount Dumaresq Regional Park has been assessed as having a basic level of priority for management and will be managed according to this priority rating.

Park management will be based on the best available local knowledge, professional judgement and anecdotal information. The basic level priority means it will receive annual routine inspections with occasional planned visits where issues have been identified. The focus is largely expected to be on natural resource management involving proactive management to understand and protect known natural values.

Cultural values will be managed proactively to protect those values known to Queensland Parks and Wildlife Service, (QPWS). Informal ad-hoc local consultation, collaboration and relationships with Traditional Owners and Indigenous stakeholders will be undertaken as required to progress specific issues and programs.

This park currently has low levels of infrequent visitor use and does not provide developed visitor sites. There is no constructed vehicle access to the park. Visitors are unlikely to encounter a ranger on site during their visit. Current and future recreational opportunities will require that visitors have a high level of self-sufficiency and are primarily responsible for their own personal safety.

Informal ad-hoc consultation with community stakeholders will be undertaken on specific issues of park management.

Park assets will consist of minimal robust infrastructure which is required for the protection of natural and cultural values.

General park values, uses and management

Mount Dumaresq Regional Park protects two regional ecosystems one of which has of concern biodiversity status, Table 1.

Species of conservation significance

Species of conservation significance recorded from this park include three plant species. Table 2.

Cultural heritage

All protected areas are recognised as cultural landscapes and Aboriginal people see themselves as inextricably linked to country both spiritually and physically. Although cultural records on physical artefacts and sites of spiritual significance are not well documented for this area, all proposed activities need to meet duty of care requirements under the *Aboriginal Cultural Heritage Act 2003*. Non-indigenous historic places will be managed in accordance with the *Queensland Heritage Act 1992*.

Priorities for park management

The one of concern regional ecosystem and three plant species of conservation significance are the main values of this park. The priorities for park management will be to mitigate any threats to these values through fire and pest management.

Management actions will be undertaken which aim to ensure:

- life and property on and adjacent to the park is protected
- fire is managed to conserve or maintain the condition of the regional ecosystem through the application of planned burn guidelines
- the impacts of existing pest species on neighbouring land uses are mitigated
- pest threats are managed to conserve or maintain the condition of the regional ecosystem and conservation significant plant species.

Appendix 1

Conservation values inventory

Table 1: Endangered and of concern regional ecosystems

Regional ecosystem number	Description	Biodiversity status
11.8.3	Semi-evergreen vine thicket on Cainozoic igneous rocks.	Of concern

Table 2: Species of conservation significance

Scientific name	Common name	Nature Conservation Act 1992 status	Environment Protection and Biodiversity Conservation Act 1999 status	Back on Track status		
Plants						
Clematis fawcettii	-	Vulnerable	Vulnerable	Low		
Cryptocarya floydii	gorge laurel	Near threatened	-	Low		
Muellerina myrtifolia	-	Near threatened	-	Low
