

Juunju Daarrba Nhirrpan National Park (Cape York Peninsula Aboriginal Land)

Management Statement

2013

The Department of Environment, Science and Innovation acknowledges Aboriginal peoples and Torres Strait Islander peoples as the Traditional Owners and custodians of the land. We recognise their connection to land, sea and community, and pay our respects to Elders past and present.

The department is committed to respecting, protecting, and promoting human rights, and our obligations under the Human Rights Act 2019.

This management statement does not intend to affect, diminish, or extinguish native title or associated rights.

The Queensland Government supports and encourages the dissemination and exchange of its information. This work is licensed under a Creative Commons Attribution 4.0 International License.

Disclaimer

All due diligence and care has been taken in the preparation of this document based on the information in the 2013 management statement. The department holds no responsibility for any errors or omissions within this document. Any decisions made by other parties based on this document are solely the responsibility of those parties.

The Juunju Daarrba Nhirrpan National Park (Cape York Peninsula Aboriginal Land) Management Statement 2013 has been extended in 2024 in line with the Queensland *Nature Conservation Act 1992* (s120G). Minor amendments have been made, including the renaming of the park from Starke National Park to Juunju Daarrba Nhirrpan National Park (Cape York Peninsula Aboriginal Land), gazetted on 29 November 2013. There has been no change to the statement's original management intent and direction.

If you need to access this document in a language other than English, please call the Translating and Interpreting Service (TIS National) on 131 450 and ask them to telephone Library Services on +61 7 3170 5470.

Park size:	8,039ha
Bioregion:	Cape York Peninsula
QPWS region:	Northern
Local government estate/area:	Cook Shire
State electorate:	Cook

Legislative framework

✓	<i>Aboriginal Cultural Heritage Act 2003</i>
✓	<i>Aboriginal Land Act 1991</i>
✓	<i>Environment Protection and Biodiversity Conservation Act 1999 (Cwlth)</i>
✓	<i>Nature Conservation Act 1992</i>

Plans and agreements

✓	Bonn Convention
✓	Japan–Australia Migratory Bird Agreement

Vision

Juunju Daarrba Nhirrpan National Park (Cape York Peninsula Aboriginal Land - CYPAL) is managed to conserve its natural and cultural values, with particular emphasis on maintaining the high diversity of its plants.

Recreation focuses on remote hiking and camping by experienced bushwalkers.

Juunju Daarrba Nhirrpan National Park (CYPAL) is transferred to Aboriginal freehold under the *Aboriginal Land Act 1991* and jointly managed in perpetuity by the Queensland Parks and Wildlife Service (QPWS) and the relevant Aboriginal land trusts.

The aspirations and cultural rights and responsibilities of the Traditional Owners is recognised and reflected in park management.

Conservation purpose

Juunju Daarrba Nhirrpan National Park (CYPAL) was first gazetted as protected area estate in 1977 (renamed as Juunju Daarrba Nhirrpan National Park (CYPAL) in 2013) to conserve sandstone plateaux and escarpments of high scenic value and some vegetation types that are uncommon on Cape York Peninsula. The park contains some of the most rugged country on the peninsula.

Protecting and presenting the park's values

Landscape

Juunju Daarrba Nhirrpan National Park (CYPAL) is located approximately 25km west of Cape Flattery and 35km north of Hope Vale. The park is comprised predominantly of mountainous country that forms part of the Great Dividing Range and includes the headwaters of the McIvor and Morgan rivers and various tributaries of Starcke River, including Running Creek.

Notable features in the landscape include Mount Norkwa, Mount Sumbailbe, Mount Paielwego, numerous waterfalls and rainforest-shrouded creeks. The park retains a high level of natural integrity and provides important habitat for a wide range of animal and plant species.

Regional ecosystems

Twenty-five regional ecosystems are mapped within Juunju Daarrba Nhirrpan National Park (CYPAL). Some of these are unique variants on the more widespread regional ecosystem types. Five are of concern communities (Table 1). The remaining 20 are listed as not of concern at present.

Except for the cliff faces and higher sandstone plateaux which carry heath and shrubland, the area is heavily vegetated. Eucalypt communities occur on the slopes below the escarpments and appear to be relatively free of pest plants and evidence of pig impacts.

The rainforests which fringe the watercourses appear to be in good condition. Pigs *Sus scrofa* pose a potential threat to these communities, as does lantana *Lantana camara* infestations on 'Munburra', an adjacent property on the northern side of the park. The significant sicklepod *Senna obtusifolia* and grader grass *Themeda quadrivalvis* populations along the road corridor north of Hope Vale through to Wakooka also pose some threat to the natural values of the park which is located on the windward side of the corridor.

Native plants and animals

Juunju Daarrba Nhirrpan National Park (CYPAL) is not currently known to protect any species of state or national conservation significance. Three species from the park are listed in international agreements (Table 2).

Xanthorrhoea sp. (Cape Bedford M.Gandini AQ601576) is found on the park. It is only known to occur on the Cape Bedford headland, the Starcke escarpment and on a major hill to the east of Saddle Hill. This grass tree is unusual in that it has bark.

Park staff currently have a limited knowledge and understanding of the park's animal and plant communities.

Aboriginal culture

The area is known to be of significance to the Guugu Yimidhirr Traditional Owners particularly the Daarrba, Juunju and Nhirrpan language and social groups. They use the area for traditional hunting, gathering and other cultural and social purposes. Currently no formalised management arrangements have been established with these Traditional Owner groups.

No current native title applications or Indigenous Land Use Agreements exist over Juunju Daarrba Nhirrpan

National Park (CYPAL).

Subject to successful negotiation with the Traditional Owners, the park is identified for future transfer to Aboriginal freehold land tenure under the *Aboriginal Land Act 1991*. Under a joint management regime, dedication of the park as national park (Cape York Peninsula Aboriginal Land) was established under the framework provided by the *Nature Conservation Act 1992* for the Cape York Peninsula Region in 2013.

Sites of material culture and places of cultural significance to the Traditional Owners are known to exist on Juunju Daarra Nhirrpan National Park (CYPAL).

Shared-history culture

In the 1870s the Palmer River gold rush brought large numbers of non-Aboriginal people into the area. Mining and grazing were major land uses associated with the Starcke district surrounding the area now gazetted as Juunju Daarra Nhirrpan National Park (CYPAL).

The national park was previously managed as part of Starcke Pastoral Holding from 1951. No infrastructure was established in this part of the former pastoral holding due to difficult access.

Tourism and visitor opportunities

Juunju Daarra Nhirrpan National Park (CYPAL) is a remote park with no visitor facilities or other departmental infrastructure.

The park is only accessible during the dry season, generally between May and November. On-ground management is also limited to this period.

Juunju Daarra Nhirrpan National Park (CYPAL) is not suited to vehicle access. Very rugged landscape, reliable water supply and cooler, higher altitude temperatures do however make it well-suited to hiking with overnight camping by experienced bushwalkers.

The Mount Webb–Wakooka Road, located approximately 1km from the eastern boundary of the park, provides good views of the cliff-lines.

Waterfalls within the park are very significant cultural sites. Traditional owners are concerned about allowing unsupervised public visitation to sites and places of cultural significance.

The Darra people have expressed an interest in running helicopter tours to the tops of the escarpments.

Education and science

Little survey and collection work has been undertaken on Juunju Daarra Nhirrpan National Park (CYPAL) to date.

Partnerships

Juunju Daarra Nhirrpan National Park (CYPAL) is adjoined by Aboriginal land managed by the Ngulun Land Trust, the Juunjuwarra Land Trust ('Munburra') and the Darra Land Trust. Other Queensland Government lands adjoin the remainder of the park and are part of the current State land dealings. The tenure of these parcels is currently under negotiation.

QPWS staff maintain working relationships with the Aboriginal land trusts to ensure protected area values are appropriately managed.

Other key issues and responses

Pest management

Pest plants

No pest plants are currently known to occur in the park. Lantana *Lantana camara* has been recorded adjacent to the fenceline to the north of the park and has the potential to spread upstream along Running Creek. Sicklepod *Senna obtusifolia* and grader grass occurs in the broader area, but is currently unknown from the park.

Pest animals

Feral pigs *Sus scrofa* are known to occur in Juunju Daarra Nhirrpan National Park (CYPAL) where there is permanent water, such as along Running Creek.

It is unknown if wild cattle *Bos* spp. still exist on the park; however it is considered likely as a consequence of

previous and surrounding land uses and limited stock fencing.

Fire management

Fire occasionally enters the park from adjacent properties.

It is assumed that a lack of fire may result in the potential encroachment of rainforest into adjacent eucalypt woodlands. Late season wildfires after big wet seasons have the potential to burn the whole park at one time, due to the large amount of cured fuel. This could significantly alter habitat and threaten ecosystems.

Other management issues

Safety

Juunju Daarrba Nhirrpan National Park (CYPAL) presents many safety hazards for park visitors, especially in steep and isolated gorge environments. Potential exists for interactions with dangerous wildlife and from other natural hazards.

Management directions

Desired outcomes	Actions and guidelines
<p>Native plants and animals Park staff progressively improve knowledge and understanding of the park's natural resources.</p>	<p>Support the ongoing recording of baseline natural resource data by QPWS staff.</p>
<p>Aboriginal culture Juunju Daarrba Nhirrpan National Park (CYPAL) is jointly managed by the Traditional Owners and QPWS and the partners have a strong collaborative working relationship.</p>	<p>Establish and implement a formal joint management regime with Traditional Owners under the statutory framework provided by the <i>Nature Conservation Act 1992</i> and the <i>Aboriginal Land Act 1991</i> for the Cape York Peninsula Region.</p> <p>Following formal establishment of joint management arrangements, work with the Traditional Owners to protect sites and places of particular cultural significance.</p> <p>Maintain cooperative working relations with nearby land trusts to maximise management effectiveness of Juunju Daarrba Nhirrpan National Park (CYPAL) and adjacent traditional country.</p>
<p>Tourism and visitor opportunities Remote bushwalking opportunities are culturally-appropriate and complementary to the rugged nature of the park.</p>	<p>Promote Juunju Daarrba Nhirrpan National Park (CYPAL) as a wild and rugged landscape suited to remote hiking and camping by experienced bushwalkers.</p> <p>Inform visitors of the hazards and risks presented by the remote, natural environment through written materials. Emphasise the need for visitors to be self-sufficient and respectful of cultural protocols attached to the significant sites and places.</p>
<p>Partnerships Park staff maintain good working relationships with community partners and other stakeholders.</p>	<p>Maintain good working relations with neighbouring landholders and, where possible, cooperatively undertake fire and pest management programs.</p>
<p>Pest management Landscape values remain in a near-natural condition, largely free of pest plants.</p>	<p>Newly-identified pest threats are treated while it is still possible to eradicate or contain them.</p>
<p>Fire management The natural biological diversity and integrity of native plant and animal communities on the park is promoted.</p>	<p>Minimise impacts from late season, large-scale and high intensity fires by implementing suitable fire regimes with relation to the frequency, intensity and timing of burns for natural communities and populations within the park.</p> <p>Where possible, coordinate planned burns with neighbouring properties.</p> <p>Implement fire regimes that will maintain the current health and diversity of plant and animal communities, with an emphasis on eucalypt communities, heaths and vine thickets.</p>

Tables – Conservation values management

Table 1: Of concern regional ecosystems

Regional ecosystem number	Description	Biodiversity status
3.8.2a	Semi-deciduous notophyll/microphyll vine forest	Of concern
3.10.1	Evergreen mesophyll/notophyll vine forest. Restricted to sandstone gullies	Of concern
3.10.5a	Deciduous notophyll/microphyll vine thicket ± <i>Gyrocarpus americanus</i> on sandstone hills	Of concern
3.11.2a	Semi-deciduous mesophyll vine forest on metamorphic ranges in the south	Of concern
3.11.6b	<i>Eucalyptus platyphylla</i> ± <i>E. leptophleba</i> ± <i>Corymbia nesophila</i> open forest to woodland on hill slopes	Of concern
